

## **STORAGE DRIVE FOR DST LECONFIELD**

RUBB geared up to deliver a military quad bike storage facility to DST Leconfield.

Installation of the 20m x 20m NV building was completed at the site in June.

The NV features 5m x 5m roller shutter doors at each gable end and will be used to store quad bikes. Rubb Buildings Ltd worked with the main contractor Carillion to bring the facility to the Defence School of Transport at Normandy Barracks, near Beverley.

DST Leconfield is the centre of excellence for driver training and teaches up to 14,000 people every year to drive trucks, tanks and other military vehicles.

The NV type building comes from Rubb's first range of trussed span structures. The design originated in Norway and the high arch of the roof makes this building ideal for bulk storage.

***we will never stop innovating***
